Intuit app assessment: answers to enter

Open the questionnaire, choose **Kyriq** in the application drop-down (not OCR EXTRACTOR), and enter the answers below tab by tab. Click **Save** after each tab, and **Submit** on the last one.

* marks a fact about the company that only you can confirm. Answer it as it is true.

Before you click Submit, three things must be done. We will tell you when each is ready: (1) a sandbox connect, disconnect and reconnect test has been run; (2) the old QuickBooks secrets have been cleared from the database; (3) the update that records intuit_tid and adds the in-app Help link is live.

General Questions

1	Has your company ever received any complaints, lawsuits, or investigative requests from regulatory authorities or government agencies? *	**No**
2	Have you worked with legal counsel to understand any regulatory requirements or other considerations related to your business activities and use of user data? *	**No**
3	Have you reviewed and confirmed that you will comply with the security policies found here?	**Yes, I confirm that my app will comply with the security policies found above.**
4	Is your app designed to enhance, streamline, or improve QuickBooks experience, or to facilitate a business process?	**Yes**
5	Are you or any of your representatives on any sanctions lists, or located or doing business in jurisdictions subject to comprehensive sanctions? *	**No**
6	Does your application involve any generative AI functionality?	**Yes**
6a	How are you using generative AI functionality? (text box)	**Paste this:** Kyriq uses generative AI in two ways. 1. Reading cheques. When a user uploads scanned cheques or a bank statement, we send each cheque image to Google's Gemini model, with OpenAI as a backup, to read the payee, amount, date and cheque number. Only the cheque image is sent. No QuickBooks data is sent in this step. 2. Voice assistant (beta). A read-only assistant answers a signed-in user's questions about their own firm's cheques, such as which cheques need attention. It uses an OpenAI model and can see cheque details and match results for that user's own firm. Those match results come from comparing cheques with QuickBooks transactions. It cannot approve, clear or edit anything, and the user must confirm any change. We do not use QuickBooks data to train or fine-tune any model.
6b	Does your app use QuickBooks data for training purposes?	**No**

App Information

1	Which of the following is true about your app? (at least one option must be checked)	**Tick only: You built your app from scratch and wrote the code that lets it interact with Intuit APIs and data**
2	What platform(s) does your app utilize and make API calls from?	**Move to Chosen: Web/SaaS and Web/Browser**
3	How does your app interact with Intuit product data?	**Move to Chosen: It reads data from Intuit product(s), and It writes data to Intuit product(s). Do not choose the deletes option.**
4	Are you building a private app, or do you plan to make it publicly available?	**We plan to make our app publicly available**
4a	How many QuickBooks Online customers do you anticipate connecting to your app? *	**50 (use your own twelve-month figure if it differs)**
5	Which types of QuickBooks Online users can use your app?	**Any user of the QuickBooks Online company**
6	Does your app integrate with platforms other than Intuit?	**No**

Authorization and Authentication

1	Have you tested connecting, disconnecting, and reconnecting your app with a sandbox or non-production company?	**Yes**
2	How often does your app refresh access tokens?	**The option meaning only when needed, just before the access token expires. If the list offers only time intervals, choose the one-hour option.**
3	Does your app retry authorization and authentication requests that have failed?	**No**
4	If your app encounters an authorization and authentication error, do you ask customers to reconnect to your app?	**Yes**
5	Did you use the Intuit discovery document to get the latest endpoints required in the OAuth2.0 flow?	**No**
6a	Can your app handle errors due to expired access tokens?	**Yes**
6b	Can your app handle errors due to expired refresh tokens?	**Yes**
6c	Can your app handle invalid grant errors?	**Yes**
6d	Can your app handle CSRF errors?	**Yes**
7	Does your app rely on the OAuth playground or other offline tools to get access or refresh tokens?	**No**

API Usage

1	Which of the broad API categories does your app use?	**Move to Chosen: Accounting API only**
2	How often does your app call our APIs for each customer?	**Move to Chosen: Daily, Weekly and Monthly. Do not choose Seasonally.**

Accounting API

1	Which customer-facing version of QuickBooks Online is your app designed for? (Select all that apply)	**Move to Chosen: Simple Start, Essentials, Plus and Advanced. If the list shows more business versions below Advanced, choose those too.**
2	Can your app handle situations where users gain or lose access to version-specific features?	**Yes**
2a	Tell us how you plan to handle this situation (Acct Change Details text box)	**Paste this:** Kyriq only uses standard transaction types that are available in every QuickBooks Online version: cheque purchases, bill payments, cheques, payments and deposits. It does not depend on any version-specific feature such as multicurrency or sales tax. Each transaction type is requested separately. If QuickBooks refuses one type because of the company's version or permissions, the sync records which type failed and carries on with the others, so a change of version never stops the whole reconciliation. A daily connection check also flags a connection that has stopped working, and the user is asked to reconnect.
3	Does your app utilize any of the following features? (Select all that you've verified and thoroughly tested)	**Move to Chosen: None of the above**
4	Do you use webhooks for your app?	**No**
5	Do you use the CDC operation for your app?	**No**

Error Handling

1	Have you tested if your app can handle API errors, including syntax and validation errors?	**Yes**
2	Does your app capture the value of the intuit_tid field from response headers?	**Yes**
3	Does your app have a mechanism for storing all error information in logs that can be shared for troubleshooting purposes, if required?	**Yes**
4	Do you provide a way for customers to contact you for support from within your app?	**Yes**

4a	How? (Error Contact Details text box)	**Paste this:** Customers can contact support from inside Kyriq. A "Help & support" link in the left sidebar, and a Help icon in the top bar on phones, opens an email to support@kyriq.com. The same address is listed in our EULA and on our Chrome Web Store listing.

Security

1	Has your company ever had a security breach that required notification to customers or government agencies/authorities? *	**No**
2	Do you have a security team that regularly assesses vulnerabilities and risks for your app? *	**Yes**
3	Are the client ID and client secret for your app stored securely (not hardcoded in your app or shown in browser console logs)?	**Yes**
4	Does your app use multi-factor authentication?	**Yes**
5	Does your app use Captcha for authentication?	**No**
6	Does your app use WebSocket?	**Yes**
7	Once a customer's Intuit data is in your system, do you allow it to be used by or shown to anyone other than that customer?	**No**
